FM Mattsson

– Different on the inside

FM Mattsson have been designing and manufacturing beautiful, quality tapware in Sweden since 1876.

The company's design philosophy is based on Scandinavian traditions of simple lines and first class materials—nothing unnecessary or complicated—always the very best quality. However, the beauty and quality of an FM Mattsson mixer is far from skin deep. Its true beauty, and what really makes FM Mattsson mixers so different, is on the inside.

FM Mattsson is a world leader in mixer technology. Our world patented mixer cartridges are incredibly simple yet amazingly brilliant.

In another world first, FM Mattsson also invented and patented the pressure balanced thermostatic mixer cartridge, used in our PBT mixers. This cartridge is designed to deliver warm water at a selected temperature, unaffected by changes

in water pressure—no more hot bursts when someone flushes the toilet! This pressure balancing feature, unique to FM Mattsson, combined with the mixer's safety temperature lock, effectively prevents scalding accidents. As an added safety feature, if the cold water supply is interrupted, the mixer will instantly shut off.

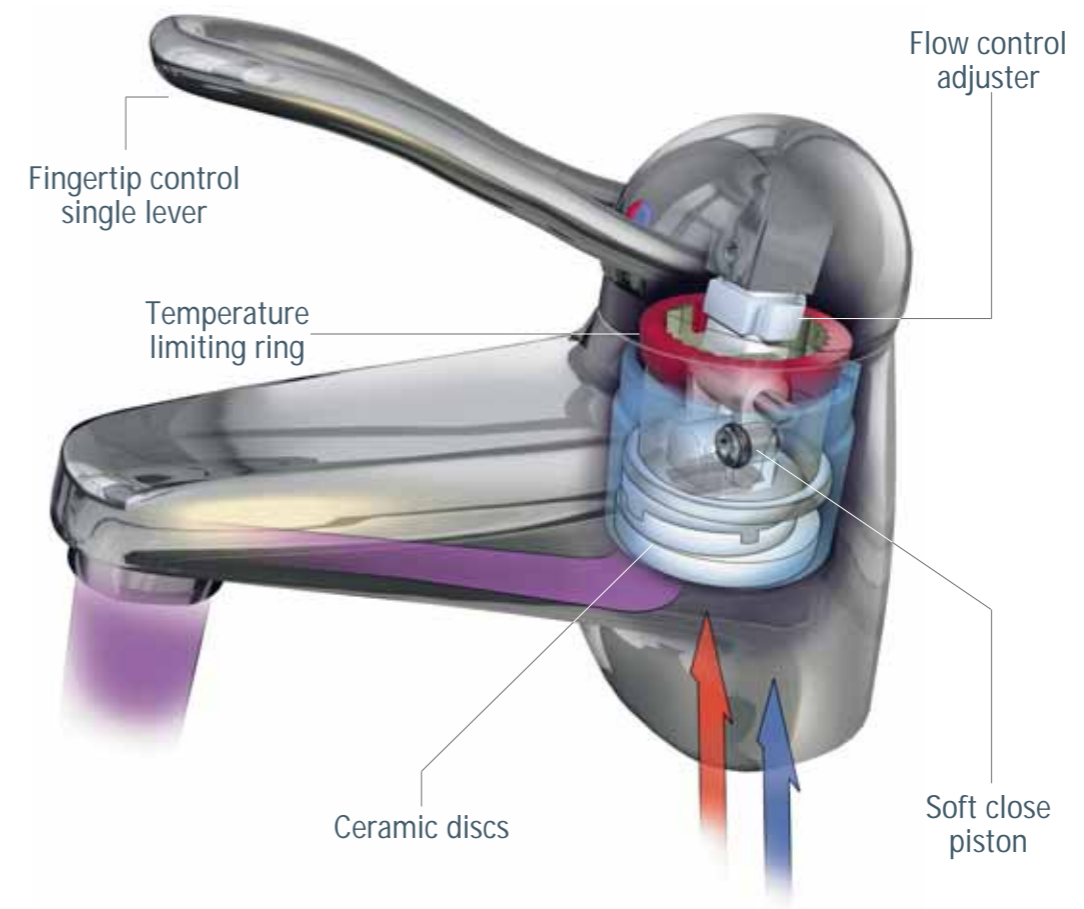

We are so confident in the performance and quality of our world class product that we offer a 10 year warranty on our cartridges and a 5 year warranty on parts.

When you buy an FM Mattsson mixer you know that you are buying stylish design, exceptional quality, world leading technology and, above all, peace of mind.

A Clever Cartridge

Our single lever mixer cartridge was the first in the world to include Softclose® technology and in-built silencing filter to reduce flow noise to a whisper and prevent water hammer in the pipework.

This clever cartridge allows you to prevent accidental scalds by limiting the maximum hot water temperature with a simple adjustment of the temperature lock, as well as save water and prevent splash back by locking the maximum flow at the desired rate.

FM Mattsson's World Patented Single Lever Mixer Cartridge.

FM Mattsson PBT Series

Pressure balancing, thermostatic mixing valves.

Intelligent Technology

An intelligent choice for any home, ideal for families with young children or elderly members. FM Mattsson's PBT mixers are designed to prevent scalding accidents in the bath or shower, by combining hot and cold water before it reaches the outlet. Factory pre-set to a maximum of 38°C, the water temperature can only be increased by deliberate over-riding of the safety lock. If the cold water supply fails, the mixer will instantly shut off, thus preventing any risk of scalding.

The pressure balancing mechanism, unique to FM Mattsson, will offset pressure changes in the water supply, so there is always a steady, constant temperature at the outlet, preventing the discomfort of a hot water burst when a toilet is flushed or another tap turned on. Made from quality materials, FM Mattsson PBT mixers meet all relevant Australian standards.

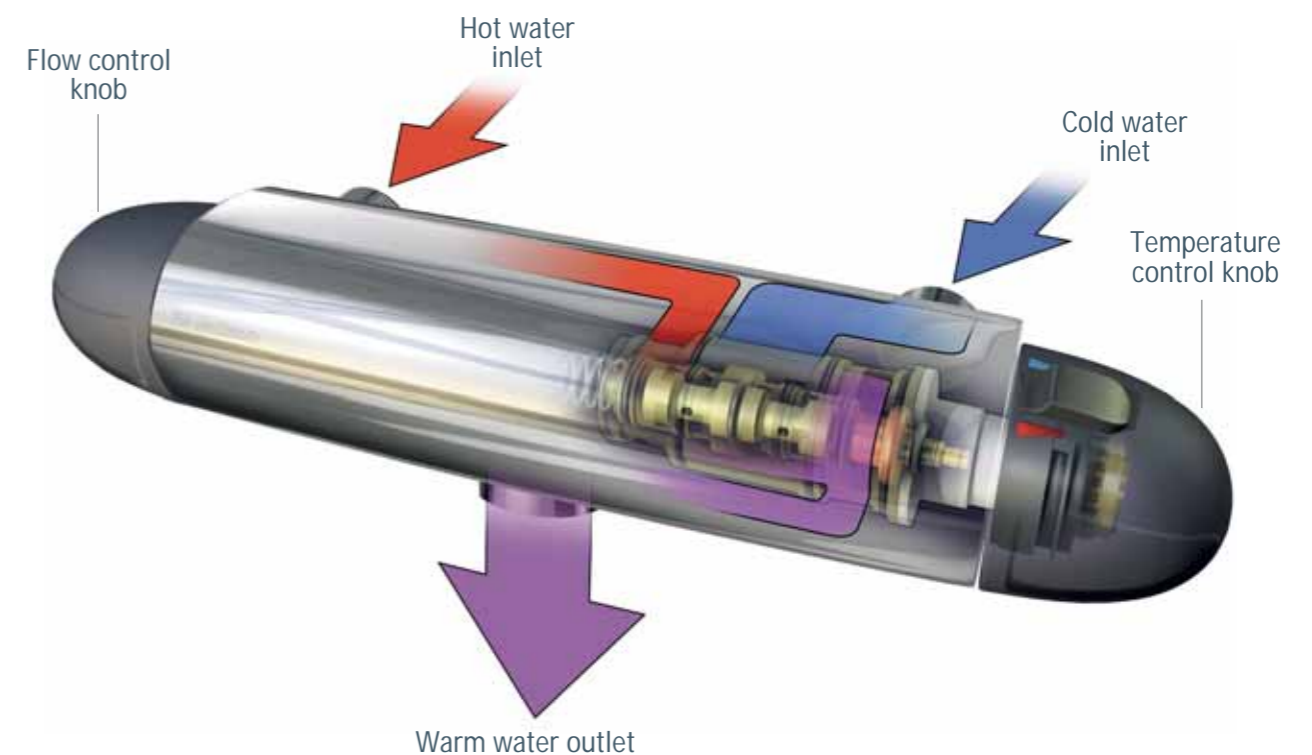

9210-7070 Exposed Pressure Balancing Thermostatic Shower Mixer

9220-7070 Concealed Bath or Shower Mixer with flow control and adjustable temperature

Make safety a priority in your home.

Combining pressure balance and thermostatic control in a single unit, intelligent thinkers can't go past FM Mattsson's PBT Series.
